

Wermuth Global Crash Insurance Strategy

January 2018

Investment philosophy

The Wermuth Global Crash Insurance ("WGCI") applies a short-term, trend-following equity long/short model, focusing on highly liquid US listed securities. The strategy is designed to generate absolute returns and provide a fat tail risk protection. WGCI pursues a divest-invest strategy in that it does not go long any of "The Carbon Underground 200" names, but it does take short positions in them. The strategy is thus particularly well designed to do well in case of a global financial crisis caused by the bursting of the carbon bubble. The proprietary software allows fully automated trade execution at high speed. The combination of long and short strategies with an expected net exposure range of minus 100% to plus 100% allows the strategy to benefit from both rising and falling prices. The strategy is diversified among numerous long/short sub-strategies and, on average, 20-50 instruments that are selected from about 2,000 eligible single instruments. The main objective for this strategy is to achieve long-term capital growth with controlled risk. High volatility in the market, or in specific sectors or instruments, consistently delivers opportunities for this strategy to generate a return profile that tends to correlate with volatility. It is therefore useful for the diversification of clients' risk portfolios.

*HFRX Systematic Diversified CTA Index (Bloomberg ticker: HFRXSDV) is an index of hedge funds which use systematic, mostly trend-following strategies as a basis of the investment process. HFRX is a family of hedge fund indices calculated by Hedge Fund Research, Inc. (HFR). CTA stands for Commodity Trading Advisors.

NOTE: This document does not constitute an offer to invest or a solicitation of an offer to invest in this strategy in any jurisdiction in which an offer or solicitation is not authorized or to any person to whom it is unlawful to make such offer or solicitation and is for information purposes only. The value of the investment may go down as well as up and investors may get back less cash than originally invested. Past performance is not necessarily a guide to future performance. An investment in the strategy in whatever form is not the same as a deposit with a banking institution. Fluctuations or movements in exchange rates may cause the value of underlying international investments to go up or down.
