

Wermuth Eastern Europe Long/Short Strategy

June 2018

Investment philosophy

The Wermuth Eastern Europe Long/Short Strategy ("WEELS") applies a long-biased, trend-following equity long/short model focusing on Russian equities. The proprietary software allows fully automated trade execution at high speed and massively reduces the possibility of human error. The combination of long and short strategies with an expected net exposure range of minus 60% to plus 200% allows the strategy to benefit from both rising and falling markets. The strategy is diversified among numerous long/short sub-strategies, more than 40 instruments and currency futures.

The main objective for this strategy is to achieve long-term capital growth with controlled risk. High volatility in the market, or in specific sectors, consistently delivers opportunities for this strategy to generate returns. A systematic approach is also applied to the rouble exposure management, which allows investors to profit from a rouble appreciation against the dollar while protecting against larger rouble losses. WEELS also pursues an impact investing strategy. It uses the shares in its portfolio to request corporate action to counter corrupt practices and waste of resources at annual meetings and engages in dialogue with management to document how this will enhance share value.

Monthly net returns
