

Wermuth Eastern Europe Long/Short Strategy

June 2020

Investment philosophy

The Wermuth Eastern Europe Long/Short Strategy ("WEELS") applies a long-biased, trend-following equity long/short model focusing on Russian equities. It is a "fossil free" or "divest-invest" strategy in that no investments will be made on the long-side into companies engaged mainly in the exploration and production of fossil fuels or holding some of the largest fossil fuel reserves in terms of CO2. On the other hand, short positions in fossil fuel companies will be taken, earning money as the global energy transition to renewables takes place.

The proprietary software driving the strategy allows fully automated trade execution at high speed. It takes the lessons learned from 20 years of trading and enforces execution with reduced possibility of human error or interference by emotional attachment to certain positions. The combination of long and short strategies with an expected net exposure range of minus 60% to plus 200% allows the strategy to benefit from both rising and falling markets. The main objective for this strategy is to achieve long-term capital growth with controlled risk. High volatility in the market, or in specific sectors, consistently delivers opportunities for this strategy to generate returns.
